

Day 1: 25 Oct 2018, Thursday

Time	Day 1 Programme (25 Oct)	Speaker	Designation, Institution	Topic
Session 1 0830 - 1000	Symposium 1: Beyond Quality to Value	Plenary Speaker 1: Mr Chan Beng Seng	Group Director, Financial Resource Management, Healthcare Finance (Subvention) and Sector Development and Commissioning, Ministry of Health	Healthcare Financing for an Evolving Singapore
		Plenary Speaker 2: Dr Samir K. Sinha MD, DPhil, FRCPC, AGSF	Director of Geriatrics, Sinai Health System and the University Health Network, Toronto, Canada	Lessons Learned from the Development of Cost-Effective and Integrated Care Models for the Elderly in Toronto, Canada
		Panel Discussion		
1000 – 1030	Morning Teabreak			
Session 2 1030 – 1200	Symposium 2: Beyond Hospital to Community	Plenary Speaker 3: Professor Finbarr C Martin	Emeritus Consultant Geriatrician and Professor of Medical Gerontology King's College London	New Service Models and Frameworks for Geriatric Syndromes of Falls, Frailty and Delirium Management
		Plenary Speaker 4: Mr Ralph Broad	Director, Inclusive Neighbourhoods Ltd and Founder, Local Area Coordination Network	Local Area Coordination: Transformation of Services and Systems – Multiple Evaluations and Learning
		Panel Discussion		
1200 – 1330	Lunch			
Session 3 1330 – 1500	SHBC Opening Ceremony	Keynote Speaker: Prof Martin Marshall	Professor of Healthcare Improvement, University College London; Vice-Chair, Royal College of General Practitioners	Rethinking Care for Diverse Population
1500 – 1530	Afternoon Teabreak			
Session 4 1530 – 1700	Symposium 3: Beyond Healthcare to Health	Plenary Speaker 5: Dr Goh Wei Leong	Chairman & Co-Founder (Chairman, Medical Committee), Healthserve	Health: The Community Calling
		Plenary Speaker 6: A/Prof Federico Girosi	Chief Scientist, Director, Research of the Digital Health CRC; Associate Professor, University of Western Sydney	Microsimulation and Health Policy Making
		Panel Discussion		

Day 2: 26 Oct 2018, Friday

Room/ Time	L1 Opal		L2 Peridot				L2 Garnet

SN	Items	Details																																			
1	Track	Diabetes																																			
2	Track Champion	Dr Phua Eng Joo, Khoo Teck Puat Hospital Dr Seow Cherng Jye, Tan Tock Seng Hospital																																			
3	Synopsis	<p>Diabetes mellitus is a complex chronic disease characterized by high blood glucose levels and is associated with significant morbidity and mortality. As the population ages, more Singaporeans are expected to develop diabetes, adding on to the national health burden. In designing this year's diabetes track programme, we go back to basics by focusing on aspects of healthy living in line with the SHBC congress theme of Adding Healthy Years of Life.</p> <p>In the symposium Exercise and Diabetes Mellitus, we share some of the challenges encountered by persons with diabetes who engage in exercise, and discuss how to overcome these obstacles. The second symposium Living Well with Diabetes is a multidisciplinary session with pearls on healthy eating, enhancing patient engagement and making lifestyle adjustments during travel.</p> <p>Healthcare providers need to be well-prepared in the journey to tackle the tide of diabetes and its attendant complications. We welcome you to join us in making our stand in the War on Diabetes.</p>

SN	Items	Details
1	Track	Education@NHG: Creating a Psychologically Safe Learning Environment
2	Facilitator	Mr Tong Yee, The Thought Collective
3	Synopsis	<p>The most prevalent theme that has emerged in diverse learning environments across industries, is the need to create psychological safety for each participant in a learning space; even including the teacher or instructor.</p> <p>Powerful learning requires that participants are able to bring the fullness of their presence in a room and take in all that can be offered. Yet, highly stressful schedules, disrupted environments, and complex work dynamics have all contributed to both instructors and students to bring only functional parts of themselves into the classroom. We know that work today demands us to learn beyond cognitive understanding. It also demands emotional resonance, alignment with integrity and the ability to draw relevance with work place realities.</p> <p>How do we create learning environments that facilitate holistic learning? How do we make sure that students experience safety in fully learning as they bring in their questions? What are the barriers to learning that take away safety and learning impact? In this experiential workshop, we will be working with the dynamics that are involved with this learning theme.</p> <p>Target audience: SHBC professionals & Educators in healthcare</p>

SN	Items	Details																																											
1	Track	Games for Health Innovation Symposium																																											
2	Track Champion	A/Prof Nabil Zary, LKC Medicine Dr Loh Yong Joo, Tan Tock Seng Hospital																																											
3	Synopsis	The 1st Games for Health Innovation Conference is the first conference session organized by gAmes for health InnoVation cEntre (ALIVE), a collaborative centre between NHG and LKC set up since September 2016 to bring together healthcare providers, academic institutions, industry partners with supporting government agencies and community resources in scientific validation, research and implementation of healthcare serious games initiatives for better healthcare outcomes. The focuses for this conference will be on serious games initiatives and applications in healthcare areas like healthcare education, mental health and population health. An interactive session will also be organized to bring together different stakeholders to share with us their experiences and opinions on a controversial topic with regards to healthcare serious games.

SN	Items	Details																																								
1	Track	Geriatric & Rehabilitation Medicine																																								
2	Track Champion	Dr Justin Chew, Tan Tock Seng Hospital Dr Lee Kok Keng, Yishun Community Hospital																																								
3	Synopsis	<p>This year, the Geriatric Medicine track will focus on two aspects: the first, Frailty and the Patient Journey: How frailty affects a patient's journey across the healthcare system - from illness through recovery to return to the community, passing through many phases and often continuing long after he/she has left the formal, institution-centric healthcare system. We will share the stories of three different patients, which will illustrate that the journey and outcomes often depend as much on the robustness of the person the illness is happening to as the nature of the disease itself or the utilisation of cutting edge treatments.</p> <p>The second symposium will present innovative cross-disciplinary models of care in Geriatrics and Rehabilitation Medicine, putting the spotlight on interdisciplinary rehabilitation in the acute and community hospital, nurse-led initiatives for improving care of the older person in non-Geriatric settings, and exciting collaborations between Geriatric Medicine and General Surgery. We will also discuss the challenges in multidisciplinary collaborations, and share novel findings from our qualitative research on what makes multidisciplinary teams tick.</p>

1	Track	Musculoskeletal				
2	Track Champion	Dr Justina Tan, Tan Tock Seng Hospital Adj Asst Prof James Tan - Khoo Teck Puat Hospital				
3	Synopsis	Musculoskeletal disorders are prevalent health problems in our society today. These disorders can affect people across different ages, from the young to the elderly. Being afflicted with musculoskeletal pain can hinder normal performance at work, activities or in everyday tasks. There is much to be gained by the prevention of these disorders and timely interventions can restore good function and greatly improve the quality of life of our patients. Our two sessions aim to educate participants on how to tackle common pain problems affecting the knee and shoulder respectively.

3	Synopsis	<p>Towards Change Mastery for Healthy Organisations</p> <p>Singapore Healthcare faces increasingly complex challenges as we continue to ensure a system that thrives for the patient and population. In the wake of these challenges also lie opportunities as we learn, experiment and innovate toward future models of care.</p> <p>In such an environment, healthcare workers and partners need to be agile, adaptive and masters of change. Those that thrive are quick to read and act on signals of change. They have worked out how to experiment rapidly, frequently with operating models, processes, and tactics. They have built up skills in managing complex multi-stakeholder environments in an increasingly interconnected world. So, just as living organisms continuously adapt (or change) for survival, we likewise need to be organisations that can co-learn, co-create and co-build as a collective that harnesses diversity across boundaries, in order to be healthy.</p> <p>Join with change leaders and practitioners to explore how to lead large scale change across different levels of the System. We are looking for answers to these questions:</p> <ul style="list-style-type: none"> • Why is change mastery imperative in large system, multi-stakeholder collaborations? • What are some new, helpful concepts around change today? • How can we at different levels of the System prepare and help our teams master change? • How do we create the right conditions for successful change? • What processes and tools can we use to lead change?

1	Track	Comprehensive Chronic Pain Management																				
2	Track Champion	Adj A/Prof Edwin Seet, Khoo Teck Puat Hospital																				
3	Synopsis	<p>Chronic pain is a major challenge for clinicians as well as for the Individuals who suffer from it. Multidisciplinary (or interdisciplinary) pain management embraces a combination of medical, physical and psychological therapies and is the most effective way to improve function and mood, and reduce disability. It is also known as a bio-psycho-social approach because it aims to address all the factors that influence the pain experience.</p> <p>Multidisciplinary pain management involves a team of health professionals who will comprehensively assess the condition and help patient to achieve goals. The aim of this symposium is to provide overview and create awareness about various treatment options for managing chronic pain. This includes medications and opioids are one tool for managing chronic pain but carry significant risk when misused. Improving the way opioids are prescribed can ensure patients have access to safer, more effective chronic pain treatment while reducing the number of patients who misuse, abuse or overdose from it. Interventional techniques involve injections into or around pain generators like peripheral nerves, major joints or various levels of spine. Psychological treatments like CBT (cognitive behavioral therapy) helps patient to address patterns of thinking and behavior. Physical therapy guided by physiotherapist or occupational therapist promote active self-management strategies to increase individual’s ability to work and function, perform household duties and simply enjoy life.</p>

1	Track	Preventive Medicine																																			
2	Track Champion	A/Prof Angela Chow, Tan Tock Seng Hospital Dr Lim Wei Yen, Tan Tock Seng Hospital																																			
3	Synopsis	This track focuses on preventive medicine at the population level. The first session will focus on national efforts to improve health behaviours in the community – looking at risk factor assessment, the science of programme implementation, and how we may sustain healthy practices. The second session looks at how we can preserve health and physical functioning in the elderly. A common thread that runs through both sessions is the recognition that successful preventive medicine requires a multidisciplinary approach that taps on the expertise and experience of a wide variety of professionals.

1	Track	Primary Care Forum 2018																																																												
2	Track Champion	Dr Darren Seah, National Healthcare Group Polyclinics																																																												
3	Synopsis	<p>Primary Care Forum 2018 is an annual conference for Primary Care Healthcare professionals held in conjunction with the Singapore Health and Biomedical Congress.</p> <p>Our theme for this year is "Primary Care: Integration & Innovation for the Future." In this forum we aim to focus on Innovations and Improvements that will transform primary care to achieve greater heights.</p> <p>The shift of moving healthcare beyond hospital to community has ignited both private and public primary healthcare professionals to collaborate ever closer together in research and patient care. Care delivery redesign underpinned with new Smart technology aims to disrupt the current modus operandi of how healthcare will be delivered in the future primary care setting. Technology and artificial intelligence have also empowered patients to be more proactive in taking charge of their own health and enable institutions to achieve seamless health delivery outcomes across the different transitions of care.</p> <p>There is an increasing challenge to primary care practitioners and healthcare system as our rapidly ageing population with rising prevalence of multiple morbidity require of us to creatively think out of box for value-based solutions that is cost effective and grounded in scientific evidence.</p> <p>As we continue to manage more complex patients in the community setting, primary care clinicians are faced with increasingly difficult scenarios that are beyond the medical realm. In our GP symposium, we will have GP leaders share on how they are able to engage with providers from other sectors to manage patients effectively in the primary care setting.</p>
